Education

University of Texas at Arlington **Expected Dec 2027**
Honors Bachelor of Science in Computer Science · GPA: 3.75 *Arlington, TX*

Experience

Software Developer Intern **Jun 2026 – Present**
E-Sutra Technologies *Mumbai, India*

- Resolved critical application issues across backend services, API integrations, authentication, and database workflows, improving overall system stability.
- Strengthened backend reliability by fixing logic defects, improving validation, and correcting data-integrity issues that caused inconsistent application behavior.
- Investigated complex defects from root-cause analysis through QA validation, supporting regression testing and release readiness across development environments.

Projects

CampusAI – AI Academic Productivity App | *React Native, Next.js, Node.js, TypeScript, OpenAI API* **May 2026 – Present**

- Building a full-stack academic productivity platform across mobile and web clients using React, Next.js, TypeScript, and a shared Node.js backend.
- Implemented 4 AI-powered workflows including note summarization, flashcard generation, PDF question-answering, and conversational tutoring through structured LLM API calls.
- Designed backend data models for users, uploaded files, generated study materials, and AI conversation history using relational database concepts.
- Created reusable TypeScript API utilities for authentication, file uploads, AI-generation requests, response parsing, and centralized error handling.

Hotel Management Platform | *React Native, Node.js, Express, SQLite, OpenAI API, Stripe Checkout* **Jan 2026 – May 2026**

- Built a full-stack hotel operations platform with mobile workflows for rooms, reservations, guests, services, reports, billing, and AI-assisted manager insights.
- Designed a relational SQLite database with 12 entities, foreign-key relationships, business-rule triggers, and analytics queries for revenue, occupancy, service usage, and guest feedback.
- Developed REST API endpoints in Node.js and Express for room availability, reservation creation, cancellation, guest records, service tracking, reports, and billing workflows.
- Integrated Stripe Checkout by creating backend checkout sessions, handling frontend success and cancel states, and simulating paid/refund states for demo testing.
- Added 5 AI-assisted operations features including daily manager briefing, natural-language insights, occupancy forecasting, revenue opportunities, and guest-recovery drafts.

RideWise – Smart Ride Comparison App | *Java, Android SDK, Firebase, Google Maps API* **Oct 2025 – Present**

- Developing a native Android ride comparison app using Java, Firebase Authentication, Firestore, and Google Maps API for route calculation and cloud-synced user sessions.
- Built a fare-comparison engine that evaluates ride estimates using distance, route, trip mode, and pricing variables to surface lower-cost ride options.
- Separated data-fetching, business logic, and UI responsibilities across 3 application layers to improve maintainability and support future ride-provider integrations.

Technical Skills

Languages: Java, JavaScript, TypeScript, SQL, Python, C/C++
Frameworks & Libraries: React Native, React, Next.js, Node.js, Express.js, Spring Boot, Android SDK
Databases: PostgreSQL, MySQL, SQLite, Firebase Firestore
Tools & Platforms: Git, GitHub, Postman, Docker, Firebase, Jira, IntelliJ IDEA, VS Code
Concepts: REST APIs, JWT Authentication, Relational Database Design, Agile Development
